

correction of estimated values (EK, KorrekturSchaetzwerteAusfuhrAnmeldung)

This BOX object is used to transmit the late registration of reliable quantity information that was only estimated at the time of registration, as well as the associated statistical value. It can be used to complete an application for export refunds and, in particular, when exporting bulk goods using a declaration with an application for presentation outside the official place in accordance with Section 12(4) AWV. For declarations without an application for an export refund, further information from the export declarationcan be corrected.

In the case of export declarations with an application for presentation outside the official place according to §12(4) AWV, a correction is generally permissible. All correctable information must then be transferred. If individual data groups or data fields are omitted, this may also mean that information already provided in the export declaration has been deleted. Individual goods items are only to be sent if there is a specific need for correction (changes, additions, deletions). The transmission of additional goods items is excluded, as is their complete deletion. In such cases, an " application for cancellation of export" must be filed and a new export declaration submitted.

The reference number of the export declaration to be corrected must always be given as the reference number (OB0020). This message then changes the existing export declaration. "CHANGE" must therefore always be used as the action (OB0050).

All information in this document is purely informative and does not constitute instructions or templates for submitting customs declarations.
The declarant is solely responsible for the content of a customs declaration. All information is provided without warranty.
