

# Event notification (en route event forwarding notification) (ME, EreignismitteilungNCTSDE)

In the ATLAS customs system, the customs office of departure uses the E_DEP_INC message to inform the sender of a transit declaration of information about an event en route for a transit process. It is sent when an event en route has been recorded in the ATLAS application "NCTS information system" or as a forwarding notification if an event notification from another member state has arrived at the German customs office of departure.

This event notification can be forwarded to your system by the BOX interface via this BOX object “Event notification (XML: EreignismitteilungNCTSDE, FlatFile: ME)”.

All information in this document is purely informative and does not constitute instructions or templates for submitting customs declarations.
