

finding of simplified customs declaration (VB, BefundVereinfachteZollanmeldung)

After receipt of a finding on a simplified customs declaration, the ZODIAK clerk can trigger the transmission of the data required for the supplementary customs declaration (EGZ). The attributes described below can then be transmitted via the BOX interface to a partner who creates the EGZ from this data. The "origin" of the data is specified for each attribute. Here are possible:

- "ZODIAK" - administrative data in ZODIAK
- "finding" - values from ATLAS
- "vZA" - values from declaration
- "supplement" - optional values for the supplementary customs declaration that could already be recorded in ZODIAK with the simplified customs declaration.

All information in this document is purely informative and does not constitute instructions or templates for submitting customs declarations.
The declarant is solely responsible for the content of a customs declaration. All information is provided without warranty.
