

Split (VV-SPL, SumAAufteilung)

The “Split” serves to transmit data of an split of a summary declaration.

Goods that are presented and recorded as an item in a summary declaration may need to be broken down into individual items for various reasons:

- The position of the summary declaration can be a collective shipment ("consolidation"), the individual shipments of which are intended for different recipients, or a transport container, the individual shipments of which must be presented.
- Since an item can only be processed as a whole (except for completion), an item must also be split up if the custody conditions are to be changed for parts of the shipment or if part of a shipment is secured or should be confiscated.
- A split can also be carried out for other organizational requirements (e.g. clearance at different times or for different customs procedures).

With this BOX object, the data for dividing exactly one item of a summary declaration into up to 9999 items can be transmitted.

Remarks:
With the action (OB0050) "**CREATE**" a new split is created in ZODIAK. The attributes VV2150 to VV2200 must be used to identify the SumA item(s) to be split. This can be done, for example, via the MRN / registration number (in VV2190) together with the registration number position (in VV2200) if the value "REG" was specified as the type of identification (in VV2150). Alternatively, identification via "AWB" is also possible, in which case the "type of SpO" (in VV2160), the SpO (in VV2170) and the custodian (in VV2180) must be specified.

If the split created in ZODIAK via "CREATE" is to be corrected, it can be completely replaced via the action (OB0050) "**REPLACE**" as long as no MRN / registration number has been assigned by ATLAS to the division.

With the additional specification of the action (OB0050) "**SEND**", an automatic transmission of the split created in ZODIAK to ATLAS can be requested. This action is only carried out if the certified plausibility checks in ZODIAK do not identify any plausibility violations. The BOX receipt (BQ) generated for each transaction sent to the ZODIAK-BOX informs about the result of this check as well as about the successfully and unsuccessfully performed actions.
