

removal of goods (WA, Warenausgang)

The BOX object „removal of goods“ is used by the participant to end the customs warehousing procedure by transferring it to an import or transit procedure (target procedure). The type of follow-up procedure is communicated via attributes of the message.
Reference can be made to standardized "templates / master copy" documents by specifying the document number in attribute OB0040.

Special feature of the goods recipient: A master record is created if master information is also entered in the attributes WA4000 - WA4320 for the customer number and it is a new customer. If a customer master already exists, the entries in the attributes WA4000 - WA4320 are not taken into account and the values are taken from the existing master.

Special features DELETE: if specified in the "object action" field (FlatFile: OB0050, XML: ObjektAktion), the goods issue in ZODIAK is deleted logically or physically (depending on the participant configuration). In the case of physical deletion, the reference number can then be used again. The deletion of a WA EGZZL is only permitted as long as no notification has been made to ATLAS. With DELETE, in addition to the object fields (FlatFile: OBxxxx, XML sequences <Transaction> and <ObjectIdentification>), only the fields for the company, plant and participant may be transmitted (FlatFile: WA0100/WA0110/WA0120, XML: Firma /Werk/Beteiligter).
