

data for exit (XD - DataEXITDE)

The message is used to transmit the data of an export process currently available in the system to a forwarder at the customs office of exit.

Conditions in the rules of the message that refer to the existence or content of data fields in the message "Release for export" are to be related to the data set of the export declaration at the time of release, also and especially if it is an Internet - or user input to which no release message is sent. In the one-stage export procedure, these conditions are to be referred to the message "Declaration for export" instead of the message "Release for export", since in this case the data is transmitted before the release.

Conditions in the rules of the message that refer to the existence or content of data fields in the international message "Anticipated Export Record" also apply to the message "Anticipated Export Record Response" if the advance export notification is only requested had to.

Please note that in addition to the note in field XD1200 for numbering the items, there are also gaps in the counter in the fields for the packages (XD1600, XD1620 and XD1630) - where the consecutive number of the package is specified in the group repetition - especially in the case of forwarding of group repetition.
