

notification for exit (XN - NotificationEXITDE)

The message is used by the forwarder at the customs office of exit to confirm the physical exit of the goods in their actual volume.

Please note the ATLAS specification that only one of the types of shipment described in field XN1030/ExportOperation can be transmitted at a time. If for example, the exit of the named goods items (AW) is transferred to ZODIAK via BOX, this must first be transmitted to ATLAS before further information can be transferred. However, you have the option of withdrawing the notification of the exit currently set in ZODIAK (not yet sent to ATLAS) by additionally specifying the object action (OB0050/ObjektAktion) "RESTORE" in order to then start a new one.

Notification for exit always relate to a presentation at the exit. The reference number from the presentation at the exit (OB0020/ObjektName from the message XP) must therefore be given as the reference number for the notification of the exit (OB0020/ObjektName). Notification for exit are exit presentation changes. "CHANGE" must therefore always be used as the object action (OB0050/ObjektAktion) - even when a notification is first sent to the output.

In the XN, it should be noted that for "Type of shipment (XN1030/ExportOperation)" NV, AV and WV, the "Finalization Indicator (XN1040/Finalization)" must not be transmitted, as it is set automatically.
