

article base for customs warehouse (ZLART, ArtikelstammZL)

This BOX object is used by the participant to create, change or delete articles in the bonded warehouse article master.

In the BOX receipt (FlatFile: BQ, XML: QuittungEingangsverarbeitung) you will receive lines of type "INF" that confirm how many items have been created, changed or deleted. You also get a confirmation line for each individual article that confirms whether the action has been carried out, or an error message of the type "WRN" or "ERR" with a corresponding explanation if the article master record is incorrect or could not be processed . The responses contain the article number and/or the attribute name.

The following overall results (flat file attribute BQ0520, XML element GesamtErgebnis) are possible:

*OKAY	All article numbers have been processed
*PARTIAL	Not all article numbers were processed.
*ERROR	No article number was processed.

The following constellations lead to errors:

- The change would make the article incorrect - only new creation is possible despite the error
- Item master record is used in dialog
- Tariff code number without additional code 1 and 2. If no additional code is available, the field is to be transmitted empty
- Change of the tariff code number if inventory record exists, i.e. as soon as a goods receipt has been posted. Even if inventory = 0
- Deletion of the item record if an inventory record exists, i.e. as soon as a goods receipt has been posted. Even if inventory = 0

Special feature of create/change of tariff code master:

If the attributes under the heading Tariff code master AR8000 to AR8050 (XML sequence Tarifcodestamm) are also transferred, a tariff code master record is created if it does not already exist.

In order to create or change a tariff code master record, the date of the start of validity must be transmitted (flat file attribute AR8000, XML element DatumGueltigkeitsbeginn). Tariff code master records are also created if the tariff code is incorrect.

A tariff code master record can only be changed if this does not result in errors.
